

Interview Plan for Manager (Stakeholder)

Objective

To gather in-depth insights from the manager about integrating generative AI into project workflows, understand potential challenges, and align the development of AI tools with organizational goals and strategies.

Next to that I want to find out in what area I can start focusing on implementing generative AI into organizations. As I've stated before, I will not be creating a fully functional product, but merely a proof of concept that showcases an aspect of an organization that can be improved by generative AI.

Interview Questions

Interview Questions:

1. Project Vision and AI Integration

- Can you describe your overall vision for generative AI integration within organizations?
- What specific goals do you hope to achieve with AI in organizational workflows?

2. Challenges and Concerns

- What challenges do you anticipate in implementing AI tools in processes?
- Are there any concerns regarding team adaptation to AI-driven workflows?

3. AI Tool Specifics

- Based on the bots we've developed, what improvements or additional functionalities would you suggest?
- How do these tools align with your expectations for AI in an organizational environment?

4. Impact on Team Roles and Responsibilities

- How do you foresee these AI tools affecting the roles and daily responsibilities of team members?
- What training or support will be required to facilitate this transition?

5. Output and Documentation

- What are your expectations for the documentation and outputs from these AI tools?
- How should these outputs be structured to facilitate ease of use and integration?

6. Ethical Considerations and Organizational Values

- How should we address ethical considerations in the development and deployment of AI?
- What steps can we take to ensure that AI integration aligns with organizational values?

7. Future-Proofing AI Integration

- How can we ensure that generative AI tools remain adaptable and relevant as project needs evolve?
- Are there opportunities for scaling these AI integrations across other departments or projects?
